

STRUCTURAL GEOLOGY AND TECTONICS

Geological mapping and structures of onland and marine areas

- Geological mapping of on land areas, realization of digital geological and thematic maps and database with GIS tools (study areas: Western Alps, Northern Apennines, Sardinia and Antarctica).
- Geological mapping of offshore areas, realization of digital geological and thematic maps and database with GIS tools (study areas: Ligurian, Tyrrhenian, Adriatic and Ionian Seas)
- Analysis and elaboration of historical geological maps.

All the activities are realized in the framework of national and international projects (es.: CARG project, CGR, MaGIC, GIGAMAP_PNRA, GEOMAP_SCAR).

KEYWORDS:

Field Mapping, Geological Maps, GIS
