

Applied Mineralogy to extreme environments

This research topic deals the applications of mineralogy in these fields:

- Environment/ Mining*: the aim of th Applied Mineralogy to extreme environments is study is the interactions between the minerals formed in acid drainage environments and the toxic elements in Ligurian and Piedmont sulphides mining areas;
- Speleogenetic* through the minerogenetic characterization of secondary minerals formed in natural and artificial caves (i.e) abandoned mines.

Keywords:

Applied Mineralogy, speleogenesis, cave minerals

DISTAV personnel

ACADEMICS: Cristina Carbone

RESEARCH ASSISTANT: Sirio Consani, Roberto Badano

Grants: public and private sources
